6 Western Springs 2021 MJ-HMP Jurisdictional Annual Report

Primary Point of Contact

Matthew Supert, Director of Municipal Services 740 Hillgrove Western Springs, IL 60558 708-246-1800 x 205 msupert@wsprings.com

Alternate Point of Contact

Michael Kelly, Fire Chief 4353 Wolf Rd Western Springs, IL 60558 708-246-1800 x 171 mkelly@wsprings.com

Annual Reporting Year: 2021

Background: Cook County and participating municipalities in the county developed a hazard mitigation plan to reduce risk from all hazards by identifying resources, information, and strategies for risk reduction. The federal Disaster Mitigation Act of 2000 requires state and local governments to develop hazard mitigation plans as a condition for federal disaster grant assistance. To prepare the plan, the participating partners organized resources, assessed risks from natural hazards within the county, developed planning goals and objectives, reviewed mitigation alternatives, and developed an action plan to address probable impacts from natural hazards. By completing this process, these jurisdictions maintained compliance with the Disaster Mitigation Act, achieving eligibility for mitigation grant funding opportunities afforded under the Robert T. Stafford Act.

Purpose: The purpose of this report is to provide an annual update on the implementation of the action plan identified in the Cook County Multi-Jurisdictional Hazard Mitigation Plan. The objective is to ensure that there is a continuing and responsive planning process that will keep the Hazard Mitigation Plan dynamic and responsive to the needs and capabilities of the partner jurisdictions. This report discusses the following:

- Natural hazard events that have occurred within the last year
- · Changes in risk exposure within the planning area (all of Cook County) Mitigation success stories
- Review of the action plan
- Changes in capabilities that could impact plan implementation
- · Recommendations for changes/enhancement.

Hazard Analysis

Hazards that represent a county-wide risk are addressed in the Risk Assessment section of the 2019 Cook County Multi-Jurisdictional Hazard Mitigation Plan Update. This section only addresses the hazards and their associated impacts that are **relevant** and **unique** to the municipality.

Flood: The southwest part of the Village - specifically portions of the Ridgewood, Springdale and Forest Hills subdivisions - is vulnerable to flooding. In 2010, 2015, 2017, 2020 and 2021 very heavy rain fell across much of north central Cook County producing widespread flooding and flash flooding in the affected areas. Numerous homes were surrounded by flood waters with water damage, inundating the the lower level of the structure or in some cases the first floor. Numerous vehicles were submerged or floating in flood waters, many were a total loss. Areas that suffered some of the most widespread flooding and extensive damage included Western Springs.

High Winds: Previously, the Village has experienced loss of power due to high winds, exposing key Village operations (that do not have 24/7 generator power) to impacts. In 2013, winds were estimated to near 70 mph caused extensive tree damage in the communities of Western Springs, La Grange, and Riverside. Extensive tree damage was reported along the railroad. A six inch diameter tree was blown down at 55th Street and La Grange Road. A six inch diameter tree limb was blown down on the 2300 block of 1st Avenue. Multiple lanes were blocked.

Snow: The Village has experienced the impacts of snow at the major route to two hospitals. The heavy snow delays emergency vehicles to calls and ambulances to hospitals.

Blizzards: The Village's elderly population would likely be homebound in the event of a blizzard.

Extreme Cold: Similar to the impacts of high winds, previously, the Village has experienced loss of power due to extreme cold, exposing key Village operations (that do not have 24/7 generator power). In 2008, very cold air spread across northern Illinois starting on December 21st and continuing through December 25th. Low temperatures dropped to 5 below to 10 below zero on the 21st and 22nd, and were in the low single digits on the 23rd, 24th and 25th. One person died due to cold exposure in Western Springs.

Ice Storms: See High Winds narrative.

Tornado: Small-tightly built community so tornado would have huge impact on life safety as well as business interruption.

Earthquake: The tightly built nature of the community could yield extensive damage if an earthquake happens.

Natural Hazard Events in 2021

Instructions: Please use the **Edit** Tool to describe new hazard occurrences/incidents from the past year that have impacted your jurisdiction and had a measurable impact on people or property. (Example: A tornado occurred on [Date] and impacted [insert area] and caused damage to [insert damages]). You may also use the Edit Tool to suggest any modifications/improvements to the hazards unique to your community, as described below from the 2019 plan.

Describe 2021 Natural Hazard Events Here: A rain storm event occurred on 06/26/21 that impacted the Springdale subdivision at Howard Avenue and Franklin Avenue and portions of the Ridgewood subdivision on Ridgewood Drive and Longmeadow Drive. The storm resulted in street flood and basement flooding as a result of overland flow inundation and backup through the sanitary sewer system.

Mitigation Strategies and Actions

The heart of the mitigation plan is the mitigation strategy, which serves as the long-term blueprint for reducing the potential losses identified in the risk assessment. The mitigation strategy describes how the community will accomplish the overall purpose, or mission, of the planning process.

New Mitigation Actions

Ongoing Mitigation Actions

The following are ongoing actions. During the 2019 update, these "ongoing" mitigation actions and projects were modified and/or amended, as needed. Reviewers of this report should refer to the Hazard Mitigation Plan for more detailed descriptions of each action and the prioritization process. Address the following for each mitigation action:

- Was any element of the action carried out during the reporting period?
- If no action was completed, why?
- Is the timeline for implementation or the action still appropriate?
- If the action was completed, does it need to be changed or removed from the action plan?

Action W2.1—Tornado and Severe Weather Siren Status Description: 2020: Tornado sirens for the Village were recently upgrade or replaced. Completed Ongoing Tornado, Severe Weather Siren Status Description: 2020: Tornado sirens for the Village were recently upgrade or replaced. Completed Ongoing Severe Weather S. 6 Emergency Management S10,000, Low Operating Budget and Grant Fun Action W2.2—Public Education Status Description: - Completed Weather hazards 2, 6 Emergency Management Low Operating Budget and Grant Fun Action W2.3—Emergency Power Status Description: 2021: Design for a generator for the water treatment plant is ongoing and is anticipated for completion in 2022. The Village generator for Well #4. 2020: The Village has a coordinated on multiple efforts to improve power reliability at several of its critical facilities. The Villagenerator at one of its three distribution wells. A fourth well is under construction and will include a transfer switch and hyportable generator configuration. Site constraints made a permanent installation unfeasible. The Village has also applied for a state grant to install a generator at its Water Treatment facility. Action W2.4—Snow Removal Equipment Enhancement Status Description: 2020: Ongoing with no substantial changes at this time. Ongoing Ongoing Winter Weather 1, 3 Public Works \$10,000, Low Operating Budget and Grant Fundin Action W2.5—Fire and Building Code Status Description:

Mitigation Success Stories: Examples of mitigation success stories include, but are not limited to: received a Grant, completed a major mitigation project,

Future Needs: Examples of future needs include, but are not limited to: receiving training to better understand the mitigation grant application process, studies that may be needed to better understand hazards/risks, etc.
