# Hazard Mitigation Point of Contact

Primary Point of Contact	Alternate Point of Contact
Kimberly Kull, Division Chief 909 Lake St. City of Evanston, IL 60201 Telephone: 847-866-5922 Email Address: kkull@cityofevanston.org	Brian Scott, Fire Chief 909 Lake St. City of Evanston, IL 60201 Telephone: 847-866-5925 Email Address: <a href="mailto:bscott@cityofevanston.org">bscott@cityofevanston.org</a>

## Jurisdiction Profile

The following is a summary of key information about the jurisdiction and its history:

- Date of Incorporation: 1872
- Current Population: 74,756 as of 2017
- Population Growth: Evanston has seen a slow, but steady increase in population of about 2% since 1990. There appears to be a continued upward trend, especially with all the new residential developments.
- Location and Description: Evanston is a suburban city in Cook County, Illinois, United State, 12 miles (19 km) north of downtown Chicago, bordered by Chicago to the south, Skokie to the west, Wilmette to the north, with a population of 75,430 as of 2012. It is one of the North Shore communities that adjoin Lake Michigan. The boundaries of the city of Evanston are coterminous with those of Evanston Township—although school districts 65 and 202 take in a small portion of eastern Skokie. Evanston is the home of Northwestern University. The City of Evanston has a total land area of 7.78 square miles.
- Brief History: Evanston was formally incorporated as a town on December 20, 1863, but
  declined in 1869 to become a city despite the Illinois legislature passing a bill for that purpose.
  Evanston expanded after the Civil War with the annexation of the village of North Evanston.
  Finally, in early 1892, following the annexation of the village of South Evanston, voters elected
  to organize as a city. The 1892 boundaries are largely those that exist today. During the 1960s,
  Northwestern changed the city's shoreline by adding a 74-acre (30 ha) lake fill.
- Climate: Evanston, IL gets 32 inches of rain and 24 inches of snow per year. The US average is 37 and 25 inches, respectively. The number of days with any measurable precipitation is 124 and, on average, there are 193 sunny days per year in the City. The July high is around 83 degrees and the January low is 18 degrees. The comfort index, which is based on humidity during the hot months, is a 47 out of 100, where higher is more comfortable. The US average on the comfort index is 44.
- Governing Body Format: The City of Evanston is governed with a Home Rule, Council/City Manager form of government. Evanston operates 10 departments including the Health Department, Fire Department, Police Department, and Public Works Department. The Fire Department Administration will oversee the adoption and implementation of this plan.
- Development Trends: In an article in January 2013 edition of Governing Magazine, a representative from the American Association of Retired Persons (AARP) acknowledges that "most features that attract older people to a community are the same ones that draw younger residents." Age-friendly communities feature "public transportation, different options for housing, lifelong learning opportunities, a robust arts and cultural scene, walkability, and urban spaces." Based on census population data, this trend appears to be playing out in Evanston—over 50 percent of Evanston's population is part of the Generation X or Y cohort. This addition of retail retention and attraction as a focus area helps support the ongoing health increasing competition posed by online retailing and the resulting downsizing of the national retail footprint poses unique challenge for Evanston. Staff has already started the tasks of data collection, developing relationships with retail brokers, and initiating proactive outreach to national and regional retailers to gauge their interest in Evanston. Staff is also exploring unique

"incubation" models to encourage home-based businesses to open in storefronts, City staff will work closely with workforce development focused on non-profits to identify opportunities to support programs aimed at comprehensive workforce. Staff will identify effective ways of linking Evanston's socio- economically diverse population to the network of workforce development resources. Contrasted with the traditional "quality of life" indicators such as climate, park, acreage per resident, or school test scores, "Quality of Place" represents the elements defining a livable place.

• Economic Development staff will explore opportunities to grow Evanston's economy by quality of place characteristics. The addition of "Quality of Place" to the 2013 update recognizes that there are a number of qualities within Evanston that make it a distinctive, attractive and compelling place to live, to visit and to start a business that differentiate it from other Chicago suburbs and Chicago itself. These qualities need to be protected, promoted, and preserved. As of 2019, Evanston has many current approved development projects. These projects include a new car wash facility, a new 40-unit town home development, a new 17-story senior living residence, a 5-story mixed use residential building, a 15-story mixed-use dwelling with 273 units, several other multi-story buildings and an additional senior living building.

# Capability Assessment

The assessment of the jurisdiction's legal and regulatory capabilities is presented in the *Legal and Regulatory Capability Table* below. The assessment of the jurisdiction's fiscal capabilities is presented in the *Fiscal Capability Table* below. The assessment of the jurisdiction's administrative and technical capabilities is presented in the *Administrative and Technical Capability Table* below. Information on the community's National Flood Insurance Program (NFIP) compliance is presented in the *National Flood Insurance Program Compliance Table* below.

#### **Jurisdiction-Specific Hazards and Impacts**

Hazards that represent a county-wide risk are addressed in the Risk Assessment section of the 2019 Cook County Multi-Jurisdictional Hazard Mitigation Plan Update. This section only addresses the hazards and their associated impacts that are **relevant** and **unique** to the municipality.

**Dam/Levee Failure:** We are not aware of any previous dam/levee failure.

**Flood:** Previously, we have experienced flooding. Oftentimes, this was flash flooding that was the result of torrential rain.

Extreme Heat: Temperatures routinely reach 90 F during months June, July, August, and September.

*Lightning:* Numerous fire-related incidents have resulted from lightning strikes. The most recent of which was just 1 week ago, knocking out about 15%-25% of electricity within Evanston

*Hail:* We have experienced minimal damage related to hail.

**Fog:** We have experienced minimal issues related to fog

*High Winds:* Numerous high wind-related events have resulted in physical damages to trees, homes, and local businesses

Earthquake: We are not aware of any previous earthquakes in our area.

**Drought:** We are not aware of any previous droughts in our area.

**Snow:** We have experienced numerous snow-related emergencies have related to downed power lines, compromised emergency response due to blocked/impassible roadways, health/safety concerns for population without heat, transportation, electricity due to power lines, etc.

**Blizzards:** We have experienced numerous snow-related emergencies have related to downed power lines, compromised emergency response due to blocked/impassible roadways, health/safety concerns for population without heat, transportation, electricity due to power lines, etc.

**Extreme Cold:** We have experienced numerous extreme weather-related events related to below freezing temps, broken pipes, loss of heat due to power outages, etc. (health issue for homeless people).

*Ice Storms:* Previously, the City has experienced downed power lines.

Tornado: We have only experienced high wind events - no tornado activity is known to date.

# Hazard Risk Ranking

The *Hazard Risk Ranking Table* below presents the ranking of the hazards of concern. Hazard area extent and location maps are included at the end of this chapter. These maps are based on the best available data at the time of the preparation of this plan, and are considered to be adequate for planning purposes.

TABLE: HAZARD RISK RANKING						
Rank	Hazard Type	Risk Rating Score (Probability x Impact)				
1	Severe Weather	45				
2	Severe Winter Weather	45				
3	Tornado	24				
4	Earthquake	16				
5	Flood	3				
6	Drought	2				
7	Dam Failure	0				
Note: Tl	ne ranking of hazards was subjectively chan	ged based on past experience.				

# Mitigation Strategies and Actions

The heart of the mitigation plan is the mitigation strategy, which serves as the long-term blueprint for reducing the potential losses identified in the risk assessment. The mitigation strategy describes how the community will accomplish the overall purpose, or mission, of the planning process. In this section, mitigation actions/projects were updated/amended, identified, evaluated, and prioritized. This section is organized as follows:

- New Mitigation Actions New actions identified during this 2019 update process
- Ongoing Mitigation Actions Ongoing actions with no definitive end or that are still in progress.
   During the 2019 update, these "ongoing" mitigation actions and projects were modified and/or amended, as needed.
- Completed Mitigation Actions An archive of all identified and completed projects, including completed actions since 2014.

The Hazard Mitigation Action Plan Matrix Table below lists the actions that make up the jurisdiction's hazard mitigation plan. The Mitigation Strategy Priority Schedule Table identifies the priority for each action.

	Hazards Mitigated	Objectives Met	Lead Agencies		Sources of Funding	Timeline/Projected Completion Date (a)

#### Recommended Mitigation Action/Implementation Plan and Project Description

Evanston has a residential population of 75,000 persons. As many as close to 20,000 Evanston residents may be classified as special needs and/or vulnerable. These populations include the elderly, non-English speaking persons, low income and disabled populations. The vulnerability of special needs populations may be magnified during an emergent event. The City of Evanston, COE, endeavors in prioritizing vulnerable populations in some of its mitigation actions considering vulnerable population's likelihood of being in more physically vulnerable places, their access to services, and their access to

Action/Implementation appropriate warning information.

Plan and Project Description:

COE's Health and Human Services Department, HHS, is proposing a hazard and vulnerability mitigation project to prepare the at-risk population for a potential natural and man-made disaster by hiring a Community Health Specialist to identify the organizations serving vulnerable populations and coordinate actions to maximize safety, well-being and the provision of essential lifesustaining services and by guaranteeing the proper dissemination of emergency and early warning information.

The Community Health Specialist will work with various public and private transportation companies to enlist their service during the evacuation of people with underlying medical conditions that require electricity and people with accessibility issues such as those that rely on Wheelchair Accessible Vehicles (WAV). The Community Health Specialist will also coordinate transportation of the population to mass dispensing and mass vaccination clinics and to the community shelters. When sheltering is required, the Community Health Specialist will be responsible for organizing all stakeholders, Officials and concerned public and private entities to operate and maintain special needs shelters, churches, schools, and local service agencies.

#### Action E-7.13

Mitigation Action	Install the Evanston Library Backup Generator Addition and Finalize Sheltering Renovations
Year Initiated	2018 (November)
Applicable Jurisdiction	City of Evanston
Lead	Evanston Public Library
Agency/Organization	,
Supporting	City of Evanston
Agencies/Organizations	
Applicable Goal	Develop and implement sustainable, cost-effective, and environmentally sound risk-reduction (mitigation) projects. Protect the lives, health, safety, and property of the citizens of Cook County from the impacts of natural hazards. Protect public services and critical
	facilities, including infrastructure, from loss of use during natural hazard events and potential damage from such activities.  Involve stakeholders to enhance the local capacity to mitigate, prepare for, and respond to the impacts of natural hazards.  Develop, promote, and integrate mitigation action plans.
Applicable Objective	Increase the resilience of (or protect and maintain) infrastructure and critical facilities.  Use the best available data, science and technologies to educate the public and to improve understanding of the location and potential impacts of natural hazards, the vulnerability of building types and community development patterns, and the measures needed to protect life safety.  Establish partnerships among all levels of local government, the private sector, and/or nongovernmental organizations to improve and implement methods to protect people and property.
Potential Funding	Currently TBD
Source	
Estimated Cost	Approximately \$1,282,801 (2019 projection)
Benefits (loss avoided)	TBD

Recommended Mitigation Action/Implementation Plan and Project Description

The process to complete this project will begin with a preliminary, overcurrent, protective device coordination study within the library facilities to ensure the viability and safety of the generator addition. Once this occurs, various switchboards, enclosed and automatic transfer switches, and a fire pump controller will be purchased and delivered to the site. Following this, complete factory assembled and packaged engine generator sets are anticipated to be purchased and the entire assembly separately contracted out to be properly installed. The installation package is likely to require, but is not limited to, the renovation of structural components within the facility, including substantial Action/Implementation reinforcement of masonry, in order for the Evanston Public Library to be able to fully function as a shelter, as is intended.

# Plan and Project Description:

Estimated Summary:

Pre-Purchase Package: \$473,000 Installation Package: \$691,955 Bonds and Insurance: \$9,460.00 General Conditions: \$47,300.00 Total Construction Cost: \$1,221,715\*

\*Note: This cost is reflective of 2018 calculation estimates, but is projected to increase moderately the further in the future construction will begin. As an example, the projected total cost for 2019 is \$1,282,801, 2020 is \$1,346,941 and 2021 is \$1,414,288.

This action also includes additional renovations to enable the Evanston Public Library to adequately serve as a shelter for the community.
